

BEKTAY TYNYSHTYK

01 **Robotics Engineer**

02 **Full-Stack Developer**

03 **AI/ML Engineer**

04 **Aspiring Startup Founder**

I build robots, software and AI-powered systems —
turning technical ideas into real-world projects
and products.

AKTOBE, KZ

2026

High school student at Nazarbayev Intellectual School in Aktobe, Kazakhstan, with 5 years of experience in robotics, 2 years in web development, and 1 year in AI/ML.

LOCATION	SCHOOL	GPA
Based in Aktobe, Kazakhstan	NIS Aktobe — Grade 11	4.8 / 5.0

About

THE SHORT VERSION

Robotics first, then
software, then machine
learning — each one
built on the last.

I'm Bektay Tynyshtyk, a Grade 11 student at Nazarbayev Intellectual School in Aktobe, Kazakhstan. My journey in technology started with robotics, which I have been studying and practicing for 5 years. Over time, I expanded into full-stack web development and artificial intelligence.

Today, I combine robotics, software engineering and machine learning to build practical projects — from educational technology and healthcare AI to environmental monitoring and predictive systems.

I'm also exploring entrepreneurship as the founder of OquBot, an educational startup focused on making AI and robotics more accessible. OquBot won Samsung Solve for Tomorrow, with a prize of 4,000,000 KZT.

● FLAGSHIP

OquBot

OquBot is an educational ecosystem designed to make learning AI and robotics more accessible to students.

ROLE

Founder

- Educational technology startup
- Focused on AI and robotics education

RESULT

Winner — Samsung Solve for Tomorrow

Prize: 4,000,000 KZT

oqubot.asia ↗ (<https://oqubot.asia>)

02 / MACHINE LEARNING / HEALTHCARE AI

Lipid AI

Lipid AI is a machine learning project designed to predict levels of LDL cholesterol using data-driven methods.

TECHNOLOGIES

Python

Machine Learning

PyTorch

Scikit-learn

RESULT

3rd Place — INFOMATRIX-ASIA 2026

Category: Applied Science

Live Demo ↗ (<https://lipidai.vercel.app>)

GitHub ↗ (https://github.com/tynyshtykb/Lipid_AI)

03 / ENVIRONMENTAL TECHNOLOGY / AI

EcoPolice

EcoPolice is a project focused on automating the identification of environmentally harmful vehicles.

RESULT

2nd place at the network stage

Advanced to the Republican stage of the Daryn Scientific Projects Competition

Received copyright registration — certificate No. 77659 (Kazpatent, 2026)

04 / MACHINE LEARNING / PREDICTIVE MAINTENANCE

QubyrFlow

QubyrFlow is a machine learning project designed to predict pipeline failures and help identify potential risks before major incidents occur.

RESULT

Finalist at the Republican MirasProjects competition

05 / COMMERCIAL WEB DEVELOPMENT

CLIENT WORK

Rakurs Production

A commercial website developed from scratch for a photography studio.

ROLE

Full-Stack Web Developer

RESULT

Completed as a paid commercial project

Project value: 100,000 KZT

Experience

01 EDUCATIONAL TECHNOLOGY STARTUP

Founder — OquBot

Founded and developed OquBot, an educational ecosystem focused on AI and robotics.

BUILDING SINCE	SAMSUNG SOLVE FOR TOMORROW
≈ 6 months	Winner · 4,000,000 KZT

02 2 YEARS

Robotics Instructor

Taught robotics to students for approximately two years.

Focus on practical robotics education and helping students understand technical concepts through hands-on projects.

03 ≈ 2 YEARS

Freelance / Commercial Web Developer

Approximately 2 years of web development experience.

Developed commercial websites and digital products.

CONFIRMED PROJECT	EARNED FROM PROJECT	TOTAL WEB EARNINGS
Rakurs Production	≈ 100,000 KZT	< 1,000,000 KZT

04 FREELANCE

AI Video Creator

Created AI-generated video content for clients.

EARNED

≈ 500,000 KZT
